No PSRBs have been recorded

What the Course Involves	The general format of the first two semesters for full-time students comprises a mix of lectures and lab sessions. Students will have access to all materials on the University's VLE. In semester 3, students are engaged on a project module, and have a structured timetable as well as meetings with their project supervisor to discuss progress and offer support. Part-time students attend the same programmed sessions as the full-time students but over an extended duration corresponding to two 15-credit modules per semester. Full Time Students - For September entry, the sequence of modules will be: Semester 1 (taken in September), Semester 2 (taken in January), Semester 3 (project, taken in May) - For January entry, the sequence of modules will be: Semester 2 (taken in January), Semester 1 (taken in September), Semester 3 (project, taken in January)
---------------------------------	--

	Part Time Students • For September entry, the sequence of modules will be: Semester 1 (taken in September), Semester 2 (taken in January), Semester 3 (taken in September), Semester 4 (taken in January), Semester 5 (project, taken in May and spanning 2 semesters) • For January entry, the sequence of modules will be: Semester 2 (taken in January), Semester 1 (taken in September), Semester 4 (taken in January), Semester 3 (taken in September), Semester 5 (project, taken in January and spanning 2 semesters)
Course Collaborations	
No collaborations listed	
Introduction to the Course	The course provides an opportunity for graduates of non-computing disciplines to develop specialist skills suitable for a career in Computing. It is designed for students who wish to apply their knowledge and expertise in a technical environment and need to develop core computing skills in order to achieve this. Students have the choice of 4 routes specialised in different fields: software development, business intelligence, cyber security, and Artificial Intelligence. Students in all routes take 6 common taught modules to develop core skills in software development, database systems, web programming, data visualisation and analytics, and IT administration as well as research and development skills required to undertake a sustained software development project. Modules focussed on software project engineering, as well as the MSc Project, are of particular value to employers as evidence of the ability to produce high quality work of an advanced technical standard to deadline and to a high standard of presentation. Depending on the selected route, students will study 2 specialised taught modules in a key field of IT, which is underpinned by our research-led teaching philosophy. In the MSc project module, students are also expected to apply their specialist knowledge learned and work on a topic relevant to their selected specialism.
	Course Aims The aims of the course are to: • foster knowledge and in-depth understanding of the capabilities of modern software development methods and tools; • develop competence in the analysis and specification of the information storage and processing needs of industrial / commercial applications; • produce practitioners who can match and integrate appropriate software technologies, hence implementing effective solutions to the requirements posed by a system specification; • develop the skills to plan and monitor the conduct of the development process with a view to ensuring delivery of a quality assured product; • provide students with a sound basis on IT service management. Aims of Each Stage of the Course The specific aims for each stage of the course are: Postgraduate Certificate To produce practitioners who will be able to:

Educational Aims of the Course	• demonstrate knowledge and understanding of current software development technologies; • depending on the chosen specialism: incorporate legal and ethical considerations into account in software design; design and manage professional systems for data analytics; configure and manage secure information systems; or incorporate Artificial Intelligence techniques in problem solving. • apply technical skills to the specification, design and implementation of moderately complex information systems. Postgraduate Diploma To produce practitioners who, in addition to the aims above, will be able to: • demonstrate knowledge and understanding of current database development technologies; • critically appraise characteristics and capabilities of underlying hardware and system software which can influence the choice and performance of software technologies; • depending on course: design user-centred software to a high standard; develop professional systems to support business decision making; design and develop secure information systems; or design and develop IT solutions to practical problems using Artificial Intelligence skills; • establish a project management framework and lay down effective procedures for monitoring progress and quality assurance of a large scale development project; • manage the delivery of computer services. Master of Science In addition to the above, MSc graduates will be able to: • analyse the requirements of any unstructured and substantial problem discerning functional, human and performance factors; critically appraise different design approaches and technical solutions; • plan, manage and execute substantial software development projects within the framework of an appropriate software lifecycle model or networking problem; • integrate different software and information design technologies; • effectively test and document complex software solutions; • solve problems of a significant level of challenge that require expertise in their chosen specialism.
Awarding Institution	Robert Gordon University
Course Duration	Full-Time Students Full-time 12 months with a September intake Full-time 16 months with a January intake Part-Time Students Part-time 28 months with a September intake Part-time 32 months with a January intake Depending on their mode of study, students can choose to undertake either a short-term (3 month) or long-term (12 months) placement. All placements require approval from the School prior to commencement. If a student goes on placement, the duration of the course will be extended by the duration of the placement.

Distinctive Features of the Course	The course provides an opportunity for graduates from non-computing disciplines to develop skills and knowledge that will prepare and equip them for a career in the IT sector. It also provides a route for graduates currently working in IT but who have no formal computing qualifications to update and refresh their skills whilst gaining a formal computing qualification. As well as developing core IT skills, the course options available allow students to develop specialist knowledge in one of several key sectors of the IT industry, underpinned by the School's research-led teaching.
Placement/Professional Experience	Students may elect to undertake a short placement or a year-long placement. The placement provides an opportunity to sample working life, be it in commerce, industry or the public sector, and apply knowledge and skills learned in the classroom to the challenges of the workplace. Students who have completed the placement as part of their course have a definite advantage when it comes to applying for graduate positions. With the combination of training, experience, and a successful degree, students are often offered subsequent employment by the placement provider with which they undertook their placement. While the student is on placement, they will be responsible to a designated member of the placement provider (the Industrial Supervisor) for the discharge of their day-to-day duties. Each student on placement is also assigned an Academic Tutor from the staff of the School, who the student can contact about any academic or non-academic problems during the placement. The Academic Tutor will hold a small number of scheduled video calls with the student and their Industrial Supervisor during the placement. Students may choose to undertake a short placement. This normally comprises 3 months of continuous, full-time supervised work experience. The assessment for a short placement experience is based on a review of the student's work-related skills, conducted by the Industrial Supervisor. Students on a short placement will normally receive at least 1 video call with their Academic Tutor. As an alternative, students may undertake a year-long placement. The year-long industrial placement normally comprises of 12 months of continuous, full-time supervised work experience. The assessment for a year-long placement is based on a review of the student's work-related skills, conducted by both the student and their Industrial Supervisor. Students on a year-long placement will normally receive at least 2 video calls with their Academic Tutor. Placements must be undertaken after the completion of all taught modules and begin before the start of the final project. A student may choose to either undertake a placement at the same time as their final project or delay the start of their final project until the placement has finished. The course leader must approve this decision. The University provides support to students interested in undertaking a placement through the Placement Office and Centre for Employability and Community Engagement. The Placement Office maintains a pool of placement opportunities and establishes contact with new placement providers as necessary. It will normally assist students by informing them of suitable placement opportunities. Students are also given help and guidance by the Placement Office in obtaining their own placement from those advertised directly by companies or through their own connections. The Centre for Employability and Community Engagement offers further support for students, including with preparing their CV and developing interview skills. All placements require approval from the School prior to commencement, in order to ensure that they are suitable for the student and to confirm that the placement provider has put adequate supervisory and health-and-safety arrangements in place. Placements cannot be guaranteed and students wishing to undertake a placement are expected to reasonably engage with the process, for example by providing a copy of their CV to the Placement Office and by attending any interviews with potential placement providers when required. The credits awarded for the placement module are in addition to the 180 credits achievable from the other modules. Successful completion is not required for progression or graduation. The credits achieved for placement may not be used to compensate for any credits from the other modules.

Opportunities for Further Study	The course has a strong grounding in research techniques and enables students to advance into research and development at doctoral level within this institution or other UK higher education institutions.
External and Internal Indicators of Quality and Standards	SCQF credit values have been used as a guide during the design of modules while the structure and content of the course has also been designed with the British Computer Society's (BCS) requirements for Practical/Engineering Applications in mind, and embedded in the core structure are modules and topics which provide the student with computing skills and knowledge in Underlying Theory, Design and Methodology, Tools and Techniques and Project Management and Group work. Standards are primarily established through QAA (Quality Assurance Agency) Benchmarks and the requirements imposed by the British Computer Society in order to gain professional course recognition. The achievement of appropriate standards is demonstrated through the University's course validation procedures and professional institution accreditation visits. The QAA qualification descriptors and Subject Benchmark Statements provide a reference framework that has guided the evolution of the School's programme, and the extent of the subject discipline, as defined by QAA, is broadly matched by the provision that now exists within the School's programmes. A number of internal processes and procedures are used by the School to ensure that standards are maintained and enhanced. Stakeholders' views on standards are routinely obtained from the Staff/Student Liaison Committee, Programme Management Teams, Student Experience questionnaires, Industrial Board, industrial visits to placement students, staff involvement in professional body activities and staff participation in accreditation events outside the School and at other HE institutions. In addition to this, best practice in teaching and learning within the University is monitored through the University quality enhancement and quality assurance processes. These include the regular five-yearly cycle of Institution-Led Subject Reviews, as well as participation in the University quality assurance committee structures, such as the University's Student Experience, and Academic Regulations Sub-Committees. Finally, it should be mentioned that the lecturers within the School have an ongoing interest in pedagogical research and a commitment to expanding the scholarship of computing science education. Academic staff help to organise, and participate in, national and international conferences and have been awarded funding from the Higher Education Academy, the Scottish Informatics and Computer Science Alliance, and the Scottish Enhancement Themes to pursue work in computer science education, as well as more general work on student transitions. The School also participates in university conferences on teaching and learning.
University Academic Regulations	This course is governed by the provisions of the University's Academic Regulations, which are available at www.rgu.ac.uk/academicregulations . In particular: Regulation A1: Courses Regulation A2: Admission and Enrolment Regulation A3: Section 1: Student Appeals (Awards and Progression) Procedure Regulation A3: Section 2: Student Conduct Procedure Regulation A3: Section 3: Student Fitness to Practise Procedure Regulation A3: Section 4: Student Fitness to Study Procedure Regulation A4: Assessment and Recommendations of Assessment Boards
University Entry Requirements	Applicants must satisfy the University's general admission requirements to courses as contained in Academic Regulation A2: Admission and Enrolment, including proficiency to a minimum standard in the English language. Specific entry requirements for this course are detailed below.

Course-Specific Entry Requirements	The normal minimum entry requirements are an Honours Degree (2nd class or better) or equivalent in a non-Computing discipline. Applicants whose first language is not English should have an IELTS of 6.0 overall, with no component lower than 5.5, or an equivalent.
Alternative Qualifications for Entry	These requirements may be relaxed for applicants holding a qualification or industrial experience of equivalent standard.
Interview Procedures	In general, an interview is not required for entry to the course.
Course-Specific Regulations	The MSc Project module cannot be condoned as it is key to demonstrating essential skills in the course such as the ability to conduct a significant piece of independent work. Furthermore, BCS guidelines state that the 60 credit project should not be compensated. The placement modules cannot be used to compensate for failed modules. All students, regardless of mode and start date, will typically undertake resits in the summer exam period. Exceptionally students who start in January may be offered a resit opportunity after completing two semesters, in April of the following year.
Equality, Diversity and Inclusion	The University has a strong commitment to the active promotion of equality across its functions, including its course provision. To this end the University has developed an inclusivity statement which articulates the University's desire to strive towards creating a working, learning and social atmosphere which is inclusive, harmonious and respectful of diversity. The University has also developed an Equality and Diversity Policy and every two years publishes a mainstreaming report, including equality outcomes, which explains how the university is developing and implementing its inclusivity statement. At a course level, Course Leaders monitor and comment on equalities data through the Annual Appraisal process. Through this process any significant trends in equalities data are highlighted. Further information can be found at: Equality & Diversity RGU. All Schools have a nominated School Contact who can advise on the requirements of the course and the range of course-specific reasonable adjustments that may be made. The University's Inclusion Centre provides support for students, details of which may be found at: The Inclusion Centre: Disability & Dyslexia Support & Advice Services RGU.
	The Purpose of the University is: - To be an innovative, inclusive and professionally focused University that has a positive impact on those we serve. The Mission of the University is: - To transform people and communities by providing excellent teaching, research and enterprise opportunities to contribute to economic, social and cultural and environmental sustainability.

University Strategy	The Culture of the University is: • To recognise and celebrate the values of curiosity, authenticity, approachability, collaboration, enterprise, ambition, respectfulness, and equality. Driven by the spirit of curiosity to continually improve, our values and principles will guide us. Our partnerships with other organisations and the communities we serve are also a mechanism to develop and grow our diversity. We have a strong commitment to widening and extending access to our courses, regardless of an individual's background. At the core of the University's significant achievements is the commitment and dedication of our people. The sense of partnership between our staff and students is strong and supporting our students to succeed in their studies and beyond is deeply ingrained in our culture. These features are reflected in the University's student satisfaction rates, which in recent years have consistently placed RGU in the top 10 of universities in the UK. RGU has a long history of inspiring highly employable graduates. This is achieved through close, collaborative contact with employers in the design and delivery of our curriculum; the range and breadth of accreditations with professional and statutory bodies; the significant role work placements and work-based learning play within our courses; and the embedding of enterprise across all our activity. In a changing society, we will ensure the continued evolution of our curriculum so that our graduates can continue to succeed in their ambitions and make a positive impact within society well into the future. To achieve our ambitions, our curriculum must be global in outlook, and we must maximise the international reach of our course portfolio. The University's research activities must have international impact and our enterprise activities must reflect the global reach of the economic sectors we work with and the ambitions of the region. RGU recognises that the creation of a sustainable future for all is a priority that unites us globally, and which demands expertise, creativity, and innovation from all subject areas and professional disciplines. Consequently, sustainability is integrated into all courses, equipping students with skills and competencies that are essential for their future careers and lives.
	This course offers students the opportunity to master core I.T. skills along with a choice of specialisation in software development, business intelligence, cyber security or Artificial Intelligence. The extent of the course syllabus demands a relatively rapid pace of delivery. Consequently, student-centred learning strategies play an important role in most subjects and throughout all stages, reinforcing and supplementing more traditional methods of subject delivery. Directed reading, independent progress through computer-based exercises, independent reading, analysis of case studies and directed searches of on-line information resources are all commonplace. The preferred strategy for any module within the course depends on the nature and extent of the syllabus content, on its subject-specific learning outcomes and its contribution to the overall course aims. In the sections that follow, a more detailed description of the learning experience is given, which distinguishes between: • core technological units; • specialist technological units (i.e. two modules representing a specialism associated with the student's choice of degree award) • professional skills units; • integrative course unit. N.B. Teaching and learning are reviewed through an annual appraisal mechanism and strategies are liable to change for the sake of continuing improvement and to reflect best practice. <u>Core Technological Modules</u>

Course-Specific Learning Experience

These modules impart specialist technical knowledge through the medium of lectures and tutorials, supplemented as necessary by student-centred material and tasks. All core modules have a supporting practical element, which is delivered through laboratory work. In practical sessions students are expected to progress through a series of graded exercises that are designed to foster analytical skills and to illustrate the synthesis of fundamental knowledge and problem solving techniques in a structured problem domain.

Specialist Technological Modules

Each course within the Information Technology programme offers specialised modules that align with different focus areas. The core IT course includes modules tailored for those interested in software development. The Business Intelligence track features modules centred around data analytics and business applications. Meanwhile, the Cyber Security pathway offers modules designed for students aiming to specialise in data and system security, and the AI route provides modules that cover key skills in applied Artificial Intelligence.

Professional Skills Module

Professional and transferable skills are developed throughout the course. These include technical writing, organisation, management, teamwork, communication, and presentation skills. Certain modules place a strong emphasis on practical exercises such as group projects, role-playing, and presentations, all of which support the planning and execution of the final project. Students also engage in self and peer evaluations, receive academic feedback, and gain broader industry insights through reading and guest lectures, promoting an understanding of professional standards and ethics in IT.

Integrative Course Modules

The MSc Project module serves the primary purpose of integrating technological and professional strands, which are developed in the preceding PgDip stage, and typically do so in the context of a substantial software development project. The project module typically involves the development and evaluation of the solution to a problem, which occurs within a relatively unstructured domain. The problem is original to the student and its solution, therefore, requires the innovative application of knowledge and techniques either studied in the previous PgDip stage or acquired through independent research of recent and relevant literature.

The MSc Project provides a vehicle for integrating specialist knowledge with analytic, problem solving, managerial and communication skills. All of these are exercised and evidenced through the execution and outcomes of the project.

Research Skills

The course structure supports the MSc Project through foundational modules that build subject-specific knowledge and project planning skills. As students prepare for their project, they gain both theoretical and practical experience in research methods, essential for critically evaluating relevant literature and emerging technologies. These research skills are not only crucial for the project itself but also valuable for ongoing professional development.

Extracurricular Activities and Transferrable Skills

Students are encouraged to participate in several School organised events and student societies:

- The School organises *Hackathon* events where students work over a 24 hour period solving unseen real-world coding and development problems in teams;
- The School organises a *Degree Show* where students can demonstrate project, coursework or personal projects to industry visitors and staff and potential employers;
- The School hosts regular BCS talks which students are encouraged to attend;
- Students have the opportunity to attend coding and cyber security competitions and challenges;

	Students from the School run a <i>Computing Society</i> that organises talks, events and social events.
Teaching and Learning Strategy	The course curriculum is designed to enable the student to acquire and develop their subject knowledge and understanding, and to gain practical and key transferable skills at Masters level. Specifically to practice and apply their knowledge skills and understanding, critically apply cognitive skills, develop and practice a wide range of communications skills, and exercise autonomy and accountability when working with others, consistent with the corresponding Scottish Credit and Qualifications Framework level 11 guidelines. As the students progress through the course they are encouraged to expand their understanding and critical appreciation of advanced IT, and develop skills in programming through techniques and tools with the application of this knowledge. The overall philosophy and strategy for the course is to provide a sound knowledge and understanding of advanced IT in the broader context. The vocationally orientated nature of the course requires the student to achieve general and specific skills, which are addressed through a combination of teaching and learning methods, including lectures, lab sessions, tutorials, seminars, student-centred learning and private study (directed reading of textbooks and online material) and structured laboratory sessions. The broad nature of the programme necessitates the use of a broad range of teaching techniques. These include lectures, seminars, tutorials, computer laboratories, open and distance learning and group work on a large project. Directed guest lectures are used to encourage and emphasise professional skills. Course induction and directed study promote development and enhancement of skills in subject context throughout course. A handbook on basic study skills is provided to all students. Learning skills are developed through tutorials, directed reading and projects. Tutorials, case studies and graded problem assignments e.g. in laboratory sessions are employed to provide practical and theoretical underpinning of subject matter provided by lectures. Students meet regularly with project supervisors during MSc project modules.
Assessment	A range of assessment methods are used, with particular emphasis placed on coursework assignments, including design exercises (ranging from design studies to fully implemented solutions), comparative studies, and investigative reports. Students are told in advance what assessment methods will be used for each module and will have access to examples of past assessments. Where the format of assessment varies significantly from one year to the next, examples of assessment will be created in order to ensure students understand what the assessment entails. All assessments include a marking/grading scheme which describes the criteria used for the award of marks/grades. Structured project documents will specify the management of the project conduct, quality guidelines and project deliverables. It will also contain information on the use of web resources to present interim MSc Project progress updates and guidelines on the live presentation and demonstration of MSc Project outcomes. The use of IT tools will be assessed in all coursework assignments (i.e. use of tools to plan, aid design, collate results and document coursework). Demonstration of IT competence is mandatory in production of documentation to support all coursework submissions.
	The University provides a number of means of supporting teaching and learning: - student induction organised on a course or School basis; - a Team Around a Student (TAAS) system of pastoral support to students including online support www.rgu.ac.uk/policies [The TAAS School Student Support Model replaces the Personal Tutor model of student support from Session 2026-27]; - an extensive programme of student study skills delivered through Student Life and the Library;

University Support for Teaching, Learning and Assessment	• an extensive library of learning resources; • close collaboration with industry and professional, statutory and regulatory bodies; • the University's active participation in Scotland's Tertiary Enhancement Programme (STEP) www.step.ac.uk ; • support for staff from the Department of Academic Quality and Learning Enhancement (AQLE), including credit-rated teaching, learning and assessment provision; • extensive opportunities for student placements with companies or organisations, academic overseas exchange programmes, and support for entrepreneurial activity and community engagement opportunities; • access to a range of professionally qualified, quality assured careers professionals to support individual students and graduates career planning and opportunity search, supported by a range of bespoke and contemporary online advice and information including the extensive RGU eHub; • Moodle, http://campusmoodle.rgu.ac.uk , the University's dedicated virtual learning environment; • a commitment to knowledge exchange and technology transfer through focused research activity, which contributes to the critical underpinning for all taught courses; • the expanding provision of state-of-the-art, purpose-built facilities and buildings.
Course-Specific Support for Teaching, Learning and Assessment	The School's computing facilities comprises a number of labs with state-of-the-art PCs, each updated over a 3 year cycle to ensure they deliver high performance and support the latest software. Remote access to laboratory PCs allows online learning students to access the facilities from elsewhere. The School believes the academic success of the students is founded in the desire to develop and maintain close links with industry and to actively seek state-of the-art technologies and integrate these into course modules. All students have access to their Course Leader and the Postgraduate Administrative Assistant in the School who work as a team in order to ensure that comprehensive support is given to students not only on academic matters but also pastoral care. Students will be supported through the School's integration of the institutional Team Around a Student (TAAS) approach, ensuring that every student has a point of contact who can provide advice, triage queries, and connect them with the most appropriate support and resources where issues may be affecting their studies or wider student experience. The project coordinator provides general advice in all aspects of projects. In addition, all students are assigned a project supervisor who provides detailed advice on the project. Students going on placement will also be supported by a placement supervisor at their place of work and an Academic Tutor for the placement. Moodle, the University's Virtual Learning Environment, is used for a variety of purposes which support learning including: (i) a repository for learning materials; (ii) a discussion forum; (iii) a place for the uploading of courseworks by students; (iv) a tool for electronic assessment; (v) a facility for feedback to students. In addition to the induction sessions offered at the start of the course, the School offers weekly focused induction sessions during Semester 1. Each session covers one or more topics of interest to students such as assessment, research, student services, academic misconduct and dealing with situations affecting performance.
	The University employs several mechanisms for evaluating and improving the quality and standards of teaching, learning and assessment, including: • <i>Annual Course Appraisal Reports</i> are prepared for each course and reviewed and approved by Course/Programme Management Teams and School Academic Boards which consider, amongst other things, feedback generated from student questionnaires; • <i>Institution-Led Subject Review</i> , involving external panel members, on a six-yearly basis to formally review its major subject provision, followed by a three year interim review to monitor progress against actions/issues raised through the review process; • <i>External Examiner Annual Reports</i> ;

University Monitoring of Quality and Standards	• Ongoing liaison with industrial/professional liaison groups. Formal Committees with responsibility for monitoring and evaluating quality and standards: • Staff/Student Liaison Committees, or equivalent; • Course/Programme Management Teams; • School Academic Boards; • Assessment Boards; • Quality Assurance and Enhancement Committee and associated Sub-Committees.
Course-Specific Monitoring of Quality and Standards	The School is committed to the highest standards of quality and best pedagogy and research within an environment which values all associated stakeholders. Formal feedback is gathered from Student Questionnaires which are issued on completion of the PgDip stage of the course. It offers the students the opportunity to comment in detail on all aspects of the course as well as the general environment, support services and facilities. Responses to, and actions resulting from, these comments are addressed fully in an Annual Course /Programme Appraisal and widely discussed by the appropriate Programme Management Team. The Course Team also runs a series of informal focus groups in order to gather both positive and negative comments on the course. Where problems are highlighted, these are discussed fully and potential solutions are considered. Less formally, the students have an opportunity to discuss with their Course Leader any course or management issues.
University Student Feedback Mechanisms	The University and RGU:Union work in partnership to create an environment which stimulates: • the participation of students, by empowering them to proactively provide views and opinions; • a supportive learning community where students and staff engage in meaningful dialogue; and • the engagement of students in the design of solutions and enhancements. This approach is underpinned by the <i>Student Partnership Agreement</i> which promotes the ethos of partnership at all levels of the University. Further information can be found at the Student Representation and Partnership Moodle Area: Student Representation & Partnership RGU . There are a variety of opportunities for students to provide feedback to the University, and to become actively involved in shaping their learning experience. These opportunities are integral to the University's approach to the quality assurance and enhancement of teaching and learning, and the holistic student experience. Mechanisms through which students are engaged and supported include: • participation in student evaluation questionnaires and where relevant the <i>National Student Survey (NSS)</i> ; • staff/student liaison arrangements at course/programme level;

	• support for Student Representatives; • student representation on Institution-Led Subject Review Panels and Validations; • student representation on key University committees.
Course-Specific Student Feedback Mechanisms	The University uses a variety of mechanisms to obtain feedback from students about their learning experience. The University has a system of student representation, via the appointment of Student Representatives for each course, who in turn represent the interests of their colleagues at Staff/Student Liaison meetings held each semester with staff representatives from the School concerned. Student Representatives are also invited to attend a meeting with the Dean of School during the first and second semester to discuss a selection of topics and to air any concerns they have. The notes of all these meetings and responses to any issues raised are subsequently made available. A single Staff/Student Liaison Committee exists for all postgraduate courses in the School, which meets regularly. The Committee comprises the Dean of School, Course Leaders, teaching staff and class representatives from each course intake and meets at least once per semester to exchange information and discuss issues.

Awards

Stage 1

<i>Permissible Awards</i>	<i>Title</i>	<i>Location</i>	<i>Target Award</i>	<i>PSRB</i>	<i>Award Credits</i>
Postgraduate Certificate - PgCert	Information Technology with Cyber Security	Aberdeen, United Kingdom	Exit Award		60
Postgraduate Certificate - PgCert	Information Technology with Business Intelligence	Aberdeen, United Kingdom	Exit Award		60
Postgraduate Certificate - PgCert	Information Technology	Aberdeen, United Kingdom	Exit Award		60
Postgraduate Certificate - PgCert	Information Technology with Artificial Intelligence	Aberdeen, United Kingdom	Exit Award		60
Postgraduate Diploma - PgDip	Information Technology	Aberdeen, United Kingdom	Exit Award		120
Postgraduate Diploma - PgDip	Information Technology with Business Intelligence	Aberdeen, United Kingdom	Exit Award		120
Postgraduate Diploma - PgDip	Information Technology with Cyber Security	Aberdeen, United Kingdom	Exit Award		120
Postgraduate Diploma - PgDip	Information Technology with Artificial Intelligence	Aberdeen, United Kingdom	Exit Award		120
Master of Science - MSc	Information Technology with Cyber Security	Aberdeen, United Kingdom	Target Award		180
Master of Science - MSc	Information Technology	Aberdeen, United Kingdom	Target Award		180
Master of Science - MSc	Information Technology with Business Intelligence	Aberdeen, United Kingdom	Target Award		180
Master of Science - MSc	Information Technology with Artificial Intelligence	Aberdeen, United Kingdom	Target Award		180

Level Learning Outcomes

On successful completion of this Course the learner will be able to :

#	Description	SCQF Characteristic	SCQF Level
LLO1	Current database technologies.	SC1	SCQF 11
LLO2	The capabilities of modern software development methods and tools.	SC1	SCQF 11
LLO3	The analysis and specification of the information storage and processing needs of industrial and commercial applications.	SC1	SCQF 11
LLO4	How to match and integrate appropriate software technologies, and thus implement effective solutions to the requirements posed by a system specification.	SC1	SCQF 11
LLO5	How to plan and monitor the conduct of the development process with a view to ensuring delivery of a quality-assured product.	SC1	SCQF 11
LLO6	The frameworks and best practice in IT service delivery.	SC1	SCQF 11
LLO7	Depending on course specialisms: the design of user-centred software conforming to legal and ethical frameworks; the management and analysis of data to extract actionable information; securing and protecting data and computer systems; application of Artificial Intelligence techniques to solve problems.	SC1	SCQF 11
LLO8	Appropriate research methodologies and detailed understanding of the particular area in which the Masters project is carried out.	SC1	SCQF 11
LLO9	Produce structured and coherent written reports to document the investigation and survey of a problem domain	SC4	SCQF 11
LLO10	Document research strategy and design decisions and to record research or test strategies and results throughout the various stages of a major research /information systems development project	SC4	SCQF 11
LLO11	Produce a clear and coherent thesis which documents the process and end result of a major research/ information systems development exercise	SC4	SCQF 11
LLO12	Deliver a lucid and coherent oral defence of the work undertaken during the Masters project before a live audience of peers and academics.	SC4	SCQF 11
LLO13	Apply statistical methods to assess and evaluate research or experimental test results.	SC2	SCQF 11
LLO14	Make effective use of available IT tools and packages to undertake the practical work of the PgC/PgD modules	SC2	SCQF 11
LLO15	Produce high quality technical documentation to accompany coursework submissions and to access online learning resources	SC2	SCQF 11
LLO16	Make effective use of available IT tools and packages to enhance the production and presentation of the Masters project report and oral defence.	SC2	SCQF 11
LLO17	Work autonomously or with minimal guidance, where appropriate, direct and manage own learning using the full range of resources and study techniques appropriate to the specialist area(s) covered by the course.	SC3	SCQF 11
LLO18	Demonstrate the various skills required to work effectively with a research supervisor and with any other support staff	SC3	SCQF 11
LLO19	Analyse an information systems problem identifying key requirements.	SC3	SCQF 11
LLO20	Propose solutions to information systems requirements, using appropriate notations to express solution concepts and aid reasoning about the efficacy of the proposed design.	SC3	SCQF 11
LLO21	Evaluate the efficacy of proposed solutions.	SC3	SCQF 11
LLO22	Apply critical judgment in the selection and application of analysis / test strategies for validating research outcomes / testing software and compliance to initial requirements	SC3	SCQF 11

LLO23	Formulate effective solutions to realistic problems related to the focus of the course.	SC3	SCQF 11
LLO24	Select and conduct the Masters project applying an analytic, rigorous and critical approach to identifying project goals, proposing and evaluating different research/solution strategies and generating a useful and effective output.	SC3	SCQF 11
LLO25	Develop and critically evaluate effective solutions to complex information systems problems;	SC4	SCQF 11
LLO26	Apply advanced programming tools to analyse and develop efficient database designs	SC4	SCQF 11
LLO27	Investigate the knowledge and skills required to operate within an IT service function.	SC4	SCQF 11
LLO28	Investigate and critically appraise specialist areas of research.	SC4	SCQF 11
LLO29	Use tools and techniques to analyse existing complex data	SC4	SCQF 11
LLO30	Integrate critical reflection into work roles and responsibilities.	SC4	SCQF 11
LLO31	Adopt an analytical approach to tasks to identify problems, solutions and evaluation.	SC4	SCQF 11
LLO32	Collaborate with others to develop an IT solution to a problem.	SC4	SCQF 11
LLO33	Analyse the legal and ethical issues related to their work.	SC4	SCQF 11
LLO34	Express complex technical information verbally and through written and visual work	SC5	SCQF 11
LLO35	Show a willingness to learn from others and problem solve	SC5	SCQF 11
LLO36	Self manage time and workload scheduling, flexibility, critical analysis, and objective evaluation.	SC5	SCQF 11
LLO37	Challenge, test, analyse and evaluate programming issues and work toward a realistic and workable solution.	SC5	SCQF 11

Programme Outcome Types Reference		
#	SCQF Characteristic	SCQF Level
SC1	Knowledge and understanding	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC2	Practice: Applied knowledge, skills and understanding	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC3	Generic cognitive skills	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9

		SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC4	Communication, numeracy and IT skills	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC5	Autonomy, accountability and working with others	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12

Delivery Range

Title	Description
Full Time On Campus	Route A - IT, Non-Placement Route B - IT, Short Placement Route C - IT, Long Placement Route D - IT with Business Intelligence, Non-Placement Route E - IT with Business Intelligence, Short Placement Route F - IT with Business Intelligence, Long Placement Route G - IT with Cyber Security, Non-Placement Route H - IT with Cyber Security, Short Placement Route I - IT with Cyber Security, Long Placement Route J - IT with Artificial Intelligence, Non-Placement Route K - IT with Artificial Intelligence, Short Placement Route L - IT with Artificial Intelligence, Long Placement
Part Time On Campus	Route A - IT, Non-Placement Route B - IT, Short Placement Route C - IT, Long Placement Route D - IT with Business Intelligence, Non-Placement Route E - IT with Business Intelligence, Short Placement Route F - IT with Business Intelligence, Long Placement Route G - IT with Cyber Security, Non-Placement Route H - IT with Cyber Security, Short Placement Route I - IT with Cyber Security, Long Placement Route J - IT with Artificial Intelligence, Non-Placement Route K - IT with Artificial Intelligence, Short Placement Route L - IT with Artificial Intelligence, Long Placement

Stage 1 / Semester 1
