

DRAFT

MSc Business Analytics for Healthcare Management
School of Computing, Engineering and Technology

Version	6.0
Course Type	Postgraduate
Award Type	Master of Science - MSc
Awards	No Course Award Assigned
Code	0680
SCQF Level	Level 11
QAA Subject Benchmark	Business and Management (2022)
SCQF Credit Points	180
ECTS Credit Points	90
Valid From	2026 September as of (September 2026)

HECoS

The maximum number of HECoS Codes allowed is 3.

Code	Title	Alternate Title	Percentage
100370	information management	information management	100%
		Total	100%

Professional, Statutory and Regulatory Body (PSRB)
No PSRBs have been recorded

	The course comprises nine modules. All of the modules are rooted firmly in professional practice and are designed to provide students with an understanding of data analytics in relation to a range of business / organisational processes and domains, and specifically the application of data analytics in a healthcare context. Students are expected to demonstrate self-direction and originality in solving problems and to act autonomously in planning and delivering tasks at a professional level. Students will undertake 60 SCQF credits per semester. There are normally three to four hours of contact time for each 15-credit module per week, therefore contact hours for students are approximately 14 hours of timetabled classes per week, although this depends on the subject. This typically involves a range of lectures, tutorials and lab-based, practical, workshop sessions. Over and above this, the student will be expected to work independently to undertake further reading and research to underpin their studies. It is expected that time will be spent in preparation for interactive tutorials and completing coursework. The environment in the School, with study space in the library and open-access IT labs, provides the student with
--	---

What the Course Involves	an appropriately equipped place to work beyond the timetabled hours. The curriculum has been informed by a number of analytics related knowledge and competency frameworks, professional bodies and has been mapped against both the National Competency Framework for Data Professionals in Health and Care developed by the Association of Professional Healthcare Analysts (AphA) and the Business Analysis Body of Knowledge from the International Institute of Business Analysis (IIBA) . The curriculum develops knowledge and competencies in relation to Data Analytics, Data Management, Research Methods and the application of these areas in relation to different domains and healthcare contexts. The degree is seeking accreditation with IIBA and exploring recognition for individual health specific modules with both AphA and the International Union for Health Promotion Education The course makes use of both online and on-campus delivery. Modules are delivered by both the School of Computing, Engineering and Technology and the School of Health Sciences through lectures, workshops, live projects, case studies and industry engagement / mentorship. The MSc stage of the course provides students with the opportunity to carry out a self-directed piece of work relating to healthcare management analytics on a topic of their choosing. This can be completed as an applied analytics project where students will develop an analytics solution to a specific healthcare-focused challenge or problem, or a research-based project in a related area. In addition to taught classes, individual tutorials with staff are also available. A Course Leader is designated to assist students with their studies. Details of the modules contained in each semester can be seen further in this document. Regarding the course structure: Full-Time Students • For September entry, the sequence of modules will be: Semester 1 (taken in September), Semester 2 (taken in January), Semester 3 (project, taken in May) • For January entry, the sequence of modules will be: Semester 2 (taken in January), Semester 1 (taken in September), Semester 3 (project, taken in January) Part-Time On-Campus / Part-Time Online Learning Students • For September entry, the sequence of modules will be: Semester 1 (taken in September), Semester 2 (taken in January), Semester 3 (taken in September), Semester 4 (taken in January), Semester 5 (project, taken in May and spanning 2 semesters) • For January entry, the sequence of modules will be: Semester 2 (taken in January), Semester 1 (taken in September), Semester 4 (taken in January), Semester 3 (taken in September), Semester 5 (project, taken in January and spanning 2 semesters)
Course Collaborations No collaborations listed	
	“In order to embed digital transformation, leaders across health and care must be equipped with the necessary digital skills. That extends to the skills required to identify where digital could be used, rather than just how to use digital. This requires us to continue building knowledge and skills within the health and care system to support and deliver digital transformation. This starts from the top of an organisation, from Board-level down.” Scottish Government, Digital Health and Care Strategy Organisations are increasingly adopting data centric cultures and practices where data and analytics are at the heart of decision-making, organisations in healthcare are no different. This course builds on the success of MSc Business Analytics, which allows students to develop the skills required by organisations to develop greater insight into their audiences, customers and internal and external stakeholders, and to optimise organisational processes. Data skills are increasingly necessary in health roles with a growing demand for a variety of skills and knowledge from practitioners as well as office staff. Understanding how to record and use data for finance, staff scheduling, prescription management, space management,

Introduction to the Course	and other non-medical areas is an identified need. This MSc seeks to address the increasing need for data analytics in a healthcare context that is focused on organisational and non-medical data to improve processes and services. MSc Business Analytics for Healthcare Management has been designed in response to a growing need for data analysis skills and knowledge in health, that has been recognised at a Scottish and UK level. This exciting course prepares students to work with data effectively, from access through to analysis, developing a deep understanding of the role of data in informing organisational decisions and processes and developing an understanding of the management and use of data in a healthcare context. Students will learn to design, manage and deliver data projects, developing both an understanding of the technologies that underpin these processes and the organisational, legal and ethical considerations of working with data in a healthcare environment. The course examines strategic concepts alongside the skills and knowledge required to access, archive, analyse and visualise data for management applications. Academic staff deliver the course with input from industry professionals, with students working on real analytics projects in collaboration with relevant organisations.
Educational Aims of the Course	MSc Business Analytics for Healthcare Management will prepare students to manage data and data analytics projects, consider the broader legal, ethical, social and organisational issues of working with data, build analytics teams and understand the broader health care and public health contexts and drivers that inform analytics projects. This interdisciplinary degree draws on expertise from across the School of Computing, Engineering and Technology and the School of Health Sciences. It will develop the next generation of Health Intelligence Analysts and Healthcare Data Analysts. Beyond healthcare, the course also prepares students for careers as Business Intelligence Officers, Digital Analytics Managers and Insight Analysts. The course teaches students to access, manage, analyse and present data in appropriate formats. Students will work with a range of analytics software, techniques and data management technologies to inform business and organisational decisions based on data drawn from real world scenarios. Students will learn how to scope, manage and deliver data projects that support organisational processes. The course encourages students to contextualise their learning within professional practice through live projects, portfolio development and strong links with industry. The aims of the course and exit points are as follows: Stages One & Two (Postgraduate Certificate & Postgraduate Diploma) Students may exit with the award of PGCert Business Analytics with Healthcare Management on successful completion of 60 Credits through any of the modules taught within the course, though this must include either CB3051 or HSM206. Students may exit with the award of PGDip Business Analytics on successful completion of 120 Credits through any of the modules taught within the course. The aims of the PGCert and PGDip are as follows: • Develop a detailed understanding of the different stages of the Data Analytics and Data Mining Lifecycle and the technologies and techniques available to support each stage. • Develop an understanding of the broader healthcare environment and the underpinning principles and concepts of public health in different settings. • Evaluate client / organisational needs and select appropriate tools and technologies to collect, store and manage data. • Develop decision-making processes based on data gathering and analysis. • Develop knowledge of programming concepts for business analytics. • Develop an advanced ability to present and communicate data effectively for a range of audiences.

	• Design and deliver self-service analytics solutions and reports. • Develop the skills and knowledge required to analyse data using a range of techniques, technologies and software in order to inform business and organisation decisions. • Develop the knowledge and programming skills required to prototype business analytics applications. • To critically analyse ethical considerations when collecting and managing data and to understand and advise on the legal principles and policies which govern data collection and management. • Develop an understanding of the principles of effectively using data to manage healthcare operations. Stage 3 (Master of Science) Students are awarded MSc Business Analytics for Healthcare Management on successful completion of 180 Credits. The Masters stage requires students to demonstrate the ability to research, develop and deliver a business analytics project within a healthcare context, integrating the skills and knowledge outlined in the previous stages. Students carry out a self-directed piece of work in an area of their choosing, the design and delivery of this project is developed and assessed across two capstone modules. The project can be completed as an applied analytics project where students will develop an analytics solution for a specific organisation or problem, or a research-based project in a related area. Both options require students to demonstrate the ability to work autonomously and develop their own methods of enquiry and, through the implementation of appropriate strategies, reach appropriate solutions.
Awarding Institution	Robert Gordon University
Course Duration	Full-Time Students Full-time 12 months with a September intake Full-time 16 months with a January intake Part-Time On-Campus / Online Learning Students Part-time 28 months with a September intake Part-time 32 months with a January intake Depending on their mode of study, students can choose to undertake either a short-term (3 months) or long-term (12 months) placement. All placements require approval from the School prior to commencement. If a student goes on placement, the duration of the course will be extended by the duration of the placement.
	This course aims to provide the student with the specialist knowledge, professional expertise, and higher-level skills to enable them to become future leaders in the field of healthcare management analytics. The teaching team all have specialist expertise in the modules they deliver, and draw upon experience of industry and their own research output. Employability statistics and feedback from industry suggests that there is a considerable demand for individuals who can initiate and manage data analytics projects, develop research questions, understand legal, ethical and social considerations, shape data cultures across organisations and communicate the results of business analytics projects to a range of stakeholders and audiences. In the context of healthcare, both Scottish Government Policy and discussions with analytics professionals in health have stressed the growing need for digital and data skills. In

Distinctive Features of the Course	particular, understanding how to record and use data for finance, staff scheduling, prescription management, space management, and other non-medical areas is an identified need. While there are a number of competitors delivering courses which focus on medical data analysis, there is an increasing need for data analysis in a healthcare context that is focused on organisational and non- medical data to improve processes and services, it is this area that this course addresses. The interdisciplinary approach taken within the course is strengthened further through joint delivery of the course by the School of Computing, Engineering and Technology and the School of Health Sciences, providing a unique blend of technical skills, an understanding of the organisational processes they benefit, and an understanding of the healthcare environment and the challenges and drivers this presents. In line with other provision within the school, the MSc takes an industry-focused and practice based approach with regular interactions with industry and practitioners currently working in related roles. Students learn through guest lecturers and live case studies / projects, gaining valuable practical skills to enhance future employment opportunities. The final capstone project provides students with the opportunity to contextualise and apply their learning throughout the course to a self-directed project in a healthcare context. While the capstone project may be research based, for most students this final project will be applied and focused on a real world challenge or problem. For students already in employment, this project can be applied in a work-based setting. This course is in line with the University's core focus on graduate employability: it not only ensures the theoretical underpinnings and critical faculties required of MSc level graduates - but ensures they are ready for the challenges in practice today and in the future, preparing students for both the day-to-day activities and changing demands of healthcare as they implement data centric approaches, solutions and cultures.
Placement/Professional Experience	Students may elect to undertake a short placement or a year-long placement. The placement provides an opportunity to sample working life, be it in commerce, industry or the public sector, and apply knowledge and skills learned in the classroom to the challenges of the workplace. Students who have completed the placement as part of their course have a definite advantage when it comes to applying for graduate positions. With the combination of training, experience, and a successful degree, students are often offered subsequent employment by the placement provider with which they undertook their placement. While the student is on placement, they will be responsible to a designated member of the placement provider (the Industrial Supervisor) for the discharge of their day-to-day duties. Each student on placement is also assigned an Academic Tutor from the staff of the School, who the student can contact about any academic or non-academic problems during the placement. Students may choose to undertake a short placement. This normally comprises 3 months of continuous, full-time supervised work experience. The assessment for a short placement experience is based on a review of the student's work-related skills, conducted by the Industrial Supervisor. Students on a short placement will normally receive at least 1 video call with their Academic Tutor. As an alternative, students may undertake a year-long placement. The year-long industrial placement normally comprises of 12 months of continuous, full-time supervised work experience. The assessment for a year-long placement is based on a review of the student's work-related skills, conducted by both the student and their Industrial Supervisor. Students on a year-long placement will normally receive at least 2 video calls with their Academic Tutor. Placements must be undertaken after the completion of all taught modules and begin before the start of the final project. A student may choose to either undertake a placement at the same time as their final project or delay the start of their final project until the placement has finished. The course leader must approve this decision.

	The University provides support to students interested in undertaking a placement through the Placement Office and Centre for Employability and Community Engagement. The Placement Office maintains a pool of placement opportunities and establishes contact with new placement providers as necessary. It will normally assist students by informing them of suitable placement opportunities. Students are also given help and guidance by the Placement Office in obtaining their own placement from those advertised directly by companies or through their own connections. The Centre for Employability and Community Engagement offers further support for students, including with preparing their CV and developing interview skills. All placements require approval from the School prior to commencement, in order to ensure that they are suitable for the student and to confirm that the placement provider has put adequate supervisory and health-and-safety arrangements in place. Placements cannot be guaranteed and students wishing to undertake a placement are expected to reasonably engage with the process, for example by providing a copy of their CV to the Placement Office and by attending any interviews with potential placement providers when required. The credits awarded for the placement module are in addition to the 180 credits achievable from the other modules. Successful completion is not required for progression or graduation. The credits achieved for placement may not be used to compensate for any credits from the other modules.
Opportunities for Further Study	Attainment of the Masters degree should enable students to progress to doctoral programmes in UK Higher Education institutions.
External and Internal Indicators of Quality and Standards	The course team aim to provide 'best in class' postgraduate education in Business Analytics and its application in specific professional contexts driven by integrated research, consultancy, industry links and scholarly activity. Teaching staff are actively engaged in research and scholarly activity which underpins course development and delivery. The QAA benchmarking statements for degrees in Business and Management and also Health Studies underpins programme design and delivery and provides general guidance for developing learning outcomes of the courses as a whole, thereby ensuring programme, course and module evaluation against appropriate standards. The Scottish Credit and Qualification Framework level 11 statements are used during the design of modules, courses and programmes and the relevant SCQF level included within each module descriptor. As noted, the curriculum has been informed by a number of analytics related knowledge and competency framework and been mapped against the National Competency Framework for Data Professionals in Health and Care developed by AphA and the Business Analysis Body of Knowledge from IIBA. The degree is seeking accreditation with IIBA and exploring recognition for individual health specific modules with both AphA and the International Union for Health Promotion Education. By mapping to the content and frameworks represented by these external bodies the curriculum has been assured as relevant and appropriate to the careers the course is aligned to. Throughout the development of MSc Business Analytics and this subsequent Healthcare Management title, the course team has consulted a number of professional bodies, employers and industry groups on the design of the course including the Schools Communications Industry Liaison Group, DataLab (Scotland's Innovation Centre for Data Science) and organisations including the NHS and the Health Foundation to ensure the course design is aligned to practices in industry. The School makes use of External Examiners to assure standards and quality in assessment – in terms of both assessment instruments and samples of students' work, and who are in attendance at Assessment Boards. External Examiners are appointed from both academic and practitioner backgrounds, as well as from both traditional and new universities of high reputation and cover the key subject areas. Academic staff from within all collaborating Schools act as external examiners at other universities and academic institutions and are also invited to participate in review and validation events at other institutions. Such activity is clearly a mark of esteem and serves as a useful benchmarking tool for the subject area as a whole. Experience gained in this capacity is used to enhance the department's provision.

University Academic Regulations	This course is governed by the provisions of the University's Academic Regulations, which are available at www.rgu.ac.uk/academicregulations . In particular: Regulation A1: Courses Regulation A2: Admission and Enrolment Regulation A3: Section 1: Student Appeals (Awards and Progression) Procedure Regulation A3: Section 2: Student Conduct Procedure Regulation A3: Section 3: Student Fitness to Practise Procedure Regulation A3: Section 4: Student Fitness to Study Procedure Regulation A4: Assessment and Recommendations of Assessment Boards
University Entry Requirements	Applicants must satisfy the University's general admission requirements to courses as contained in Academic Regulation A2: Admission and Enrolment, including proficiency to a minimum standard in the English language. Specific entry requirements for this course are detailed below.
Course-Specific Entry Requirements	An undergraduate honours degree or equivalent provides entry to the course.
Alternative Qualifications for Entry	Equivalent overseas qualifications and Recognition/Accreditation of Prior Experiential Learning (including consideration of professional qualifications) are considered on an individual basis. Applicants gaining entry via Recognition of Prior Experiential Learning may be exempted for up to 90 credits (for entry to the MSc Stage).
Interview Procedures	Applicants are not normally required to be interviewed for entry to the course. An interview may be used as part of the process for evaluating entry on the basis of Recognition of Prior Experiential Learning.
Course-Specific Regulations	The MSc Project module is defined as central to the objectives of the course and failure may not be condoned. The placement modules cannot be used to compensate for failed modules. All students, regardless of mode and start date, will typically undertake resits in the summer exam period. Exceptionally students who start in January may be offered a resit opportunity after completing two semesters, in April of the following year.
Equality, Diversity and Inclusion	The University has a strong commitment to the active promotion of equality across its functions, including its course provision. To this end the University has developed an inclusivity statement which articulates the University's desire to strive towards creating a working, learning and social atmosphere which is inclusive, harmonious and respectful of diversity. The University has also developed an Equality and Diversity Policy and every two years publishes a mainstreaming report, including equality outcomes, which explains how the university is developing and implementing its inclusivity statement. At a course level, Course Leaders monitor and comment on equalities data through the Annual Appraisal process. Through this process any significant trends in equalities data are highlighted. Further information can be found at: Equality & Diversity RGU.

	All Schools have a nominated School Contact who can advise on the requirements of the course and the range of course-specific reasonable adjustments that may be made. The University's Inclusion Centre provides support for students, details of which may be found at: The Inclusion Centre: Disability & Dyslexia Support & Advice Services RGU.
University Strategy	The Purpose of the University is: - To be an innovative, inclusive and professionally focused University that has a positive impact on those we serve. The Mission of the University is: - To transform people and communities by providing excellent teaching, research and enterprise opportunities to contribute to economic, social and cultural and environmental sustainability. The Culture of the University is: - To recognise and celebrate the values of curiosity, authenticity, approachability, collaboration, enterprise, ambition, respectfulness, and equality. Driven by the spirit of curiosity to continually improve, our values and principles will guide us. Our partnerships with other organisations and the communities we serve are also a mechanism to develop and grow our diversity. We have a strong commitment to widening and extending access to our courses, regardless of an individual's background. At the core of the University's significant achievements is the commitment and dedication of our people. The sense of partnership between our staff and students is strong and supporting our students to succeed in their studies and beyond is deeply ingrained in our culture. These features are reflected in the University's student satisfaction rates, which in recent years have consistently placed RGU in the top 10 of universities in the UK. RGU has a long history of inspiring highly employable graduates. This is achieved through close, collaborative contact with employers in the design and delivery of our curriculum; the range and breadth of accreditations with professional and statutory bodies; the significant role work placements and work-based learning play within our courses; and the embedding of enterprise across all our activity. In a changing society, we will ensure the continued evolution of our curriculum so that our graduates can continue to succeed in their ambitions and make a positive impact within society well into the future. To achieve our ambitions, our curriculum must be global in outlook, and we must maximise the international reach of our course portfolio. The University's research activities must have international impact and our enterprise activities must reflect the global reach of the economic sectors we work with and the ambitions of the region. RGU recognises that the creation of a sustainable future for all is a priority that unites us globally, and which demands expertise, creativity, and innovation from all subject areas and professional disciplines. Consequently, sustainability is integrated into all courses, equipping students with skills and competencies that are essential for their future careers and lives.
	The course philosophy is in-keeping with the strategy and priorities of both the University and the School of Computing, Engineering and Technology with a strong focus on employability, enterprise, engagement with industry and developing mindset in parallel to skillset. MSc Business Analytics for Healthcare Management aims to provide an exciting, interdisciplinary and innovative curriculum delivered by academic staff with input from industry practitioners. The course benefits from input and expertise from the School of Health Sciences. MSc Business Analytics for Healthcare Management has been designed to deliver graduates with a unique combination of skills and knowledge drawn from an interdisciplinary

Course-Specific Learning Experience	curriculum. The theoretical and practical attributes that will be gained from the course will develop individuals who can scope, commission, manage and deliver data projects that support organisational processes in a healthcare context. Learning occurs through a range of delivery modes, including: workshops, tutorials and live projects. The experience allows students to apply theory to practice, working with data drawn from real world scenarios. The course consists of subjects that are essential to developing a critical, analytical and evaluative approach to the students' studies, requiring them to fully engage with and actively participate in the learning process. The course is intensive, enjoyable and engaging, motivating students to develop their skills and knowledge abilities to a high level. Regular attendance and engagement with all course components is required to achieve a satisfactory level of performance. The course allows students to obtain professional experience and broaden their networks whilst studying through a number of live projects delivered in liaison with industry. Students will leave with a portfolio of work as well as an academic qualification, demonstrating their ability to apply skills and knowledge. The course takes an interdisciplinary approach drawing on expertise, concepts and methods from Business Analytics, Health Studies, Information Management, and Computing. Throughout the course students will explore not just the technical aspects of working with data, but also the social, cultural, ethical, legal and organisational challenges that this can raise. This balance of technical skills, an advanced understanding of the business and organisational process they support, and the legal, ethical and cultural considerations inherent to working with data, provide a robust framework for professionals working in this area. The course expects students to develop and demonstrate a self-directed and independent approach to learning and problem solving. Students are encouraged to take responsibility for identifying and obtaining their own resource materials and for planning and managing their work, within the taught programme of lectures, workshops and online tasks. In addition to live projects which underpin the assessments of many of the taught modules, the course also provides students with the opportunity to carry out a major piece of independent study related to the application of business and data analytics to healthcare management on a topic of their choosing through a capstone project. The student will have considerable freedom to choose the topic for their final project in consultation with their supervisor. The emphasis at this stage will be on the development of the full range of knowledge and skills associated with Masters Level, together with the development of detailed knowledge of the topic being studied.
Teaching and Learning Strategy	The Learning Process: Teaching Strategy and Methods MSc Business Analytics for Healthcare Management aims to provide a learning experience that is vocationally focused, interactive and student-centered, with a dialogue between student, staff and industry at its core. The course provides students with the opportunity to apply knowledge and skills to real-world scenarios, and evaluate the success of the approaches used. The course aims to introduce students to a wide range of technologies and techniques, providing them with an advanced understanding of both the technological and conceptual landscape which underpins business analytics in a healthcare context. In ensuring students take responsibility for their studies, an ethos of continuous learning and development is pursued and deep learning is encouraged. The course curriculum is designed to develop creative, analytical and reflective practitioners, enabling students to identify learning needs and acquire, develop and enhance their knowledge, understanding and skills accordingly. The course encourages autonomous enquiry, problem solving and innovative thinking, and is aligned with the aims and learning outcomes at Masters level corresponding to the Scottish Credit and Qualifications Framework . The Programme Management and Course Teams are dedicated to promoting innovative teaching and assessment methods to ensure appropriate graduate attributes for the industry. They monitor developments in these areas, with every subject lecturer being encouraged to introduce innovations in the teaching methodology and/or assessment practices. MSc Business Analytics for Healthcare Management aims to develop knowledge, understanding, practical and personal attributes (autonomy, accountability and teamwork) in parallel to the critical, evaluative, communication, numeracy, IT skills required in this rapidly evolving field. The course uses a combination of teaching methods and sources of expertise. Tutorials and online materials are used to introduce and discuss underpinning theories, knowledge and skills. This knowledge is then explored further in a professional context through a series of academic and practitioner-led workshops. The ability to apply theory to practice is

	demonstrated through a range of assignments developed in conjunction with industry partners. All modules develop both the theoretical and the practical and are assessed in part through live projects in collaboration with appropriate organisations, allowing students to develop their portfolio and build linkages and contacts within industry. Students will engage with the course through tutorials and workshops and will be expected to engage with a range of software, data management and analytics platforms. Whilst CampusMoodle will form the primary platform for hosting content, a range of other platforms, websites and related services will be used within specific modules. In addition to the standard IT provision offered by the University, students will have access to a wide range of specialist software and equipment. The Student's Role in Learning Students are expected to be active participants in the learning process. There is a requirement for students to extend their learning from formally delivered materials through wider reading, research, and self-directed enquiry. The University encourages the utilisation of a diverse range of teaching and learning methods designed to encourage active student engagement with the learning process. Through the implementation of techniques such as group exercises, workshops, case studies, and presentations, the course team ensures that the student is given the opportunity to play an active role in their educational development. Students are encouraged to regularly reflect on their learning, and to establish a view of their own progress and development, which may form the basis of tutorial guidance with staff. Students are expected to utilise the full range of resources available to them.
Assessment	Assessment methods are designed to support the teaching and learning strategy. Various forms of assessment are used to monitor student progress. Assessment practice follows the University policies, details of which can be found here . Assessments have been designed to ensure module and course-wide learning outcomes have been met following the SCQF Level 11 characteristics of knowledge and understanding; practical skills; generic cognitive skills; communication, ICT and numeracy skills and key employability, enterprise and transferable skills. The teaching and learning strategies employed across individual modules are responsive to individual needs yet also encourage group interaction, assessment is designed for both group and individual work. Assessment is by coursework across all modules and where applicable is developed in conjunction with industry partners, allowing students to apply theory and concepts to real-world situations. Coursework will feature a variety of outputs such as client-facing reports, data visualisations, analytics dashboards, programming exercises, reflective reports, presentations, research projects and essays. In accordance with University Assessment Policy, feedback on assignments will be returned to students within 20 working days of submission. Each module provides summative feedback, which may be provided in a text based, video or audio format and aims to provide students with advice on how to improve their work in future in addition to explaining the awarded mark and highlighting problems and areas of commendation within the submitted work. Assessments are moderated internally with a sample being second marked to ensure the standard and consistency of marking, with a sample also being sent to the appropriate External Examiner for comment and moderation. Formative assessment is provided during the teaching of modules with students provided with guidance on their performance, this may be by: presentations, short exercises, class activities, case study analysis or other critical reviews.

University Support for Teaching, Learning and Assessment	The University provides a number of means of supporting teaching and learning: • student induction organised on a course or School basis; • a Team Around a Student (TAAS) system of pastoral support to students including online support www.rgu.ac.uk/policies [The TAAS School Student Support Model replaces the Personal Tutor model of student support from Session 2026-27]; • an extensive programme of student study skills delivered through Student Life and the Library; • an extensive library of learning resources; • close collaboration with industry and professional, statutory and regulatory bodies; • the University's active participation in Scotland's Tertiary Enhancement Programme (STEP) www.step.ac.uk ; • support for staff from the Department of Academic Quality and Learning Enhancement (AQLE), including credit-rated teaching, learning and assessment provision; • extensive opportunities for student placements with companies or organisations, academic overseas exchange programmes, and support for entrepreneurial activity and community engagement opportunities; • access to a range of professionally qualified, quality assured careers professionals to support individual students and graduates career planning and opportunity search, supported by a range of bespoke and contemporary online advice and information including the extensive RGU eHub; • Moodle, http://campusmoodle.rgu.ac.uk , the University's dedicated virtual learning environment; • a commitment to knowledge exchange and technology transfer through focused research activity, which contributes to the critical underpinning for all taught courses; • the expanding provision of state-of-the-art, purpose-built facilities and buildings.
Course-Specific Support for Teaching, Learning and Assessment	A detailed induction session will be provided for all incoming MSc Business Analytics for Healthcare Management students, who will receive detailed briefings on how to access and use Moodle, IT provision and the library service. In addition to the induction session a course handbook provides detailed information on all aspects of the course. Moodle is used to make course and module handbooks available and as a source of generic support materials for the School of Computing, Engineering and Technology' postgraduate students, e.g. on referencing, report and essay writing, and the use of the electronic library resources. In addition to this Moodle is used to deliver teaching materials, as a platform for assessment and feedback and to provide access to other learning sources. The course team makes full use of available technologies in teaching, learning, assessment and research and offers support in enabling students to use the available tools. Autonomous learning is developed throughout all stages of the MSc. Student support is available on-line, with students being encouraged to take full advantage of web-based information, and both electronic and paper based library resources. The library maintains a stock of up to date and relevant textbooks and resources. Students receive detailed briefings on how to avoid plagiarism and other forms of academic misconduct and on what they can expect in terms of assignments and classroom teaching styles. International students also participate in a tour of Aberdeen and surroundings and other events organised by the International Office. Students are assigned a Course Leader) who acts as Advisor of Studies to the students on the course and is able to guide students to additional support services where required.
	The University employs several mechanisms for evaluating and improving the quality and standards of teaching, learning and assessment, including: • <i>Annual Course Appraisal Reports</i> are prepared for each course and reviewed and approved by Course/Programme Management Teams and School Academic Boards which consider, amongst other things, feedback generated from student questionnaires; • <i>Institution-Led Subject Review</i> , involving external panel members, on a six-yearly basis to formally review its major subject provision, followed by a three year interim review to monitor progress against actions/issues raised through the review process; • <i>External Examiner Annual Reports</i> ;

University Monitoring of Quality and Standards	• Ongoing liaison with industrial/professional liaison groups. Formal Committees with responsibility for monitoring and evaluating quality and standards: • Staff/Student Liaison Committees, or equivalent; • Course/Programme Management Teams; • School Academic Boards; • Assessment Boards; • Quality Assurance and Enhancement Committee and associated Sub-Committees.
Course-Specific Monitoring of Quality and Standards	The School of Computing, Engineering and Technology is committed to the highest standards of quality and best practice in pedagogy and research within an environment that values all associated stakeholders. A number of internal and external mechanisms are in place to ensure the quality, integrity and high standards to which the course aspires. Formal feedback on individual modules is gathered on completion of each module, and at the end of the academic year summative Student Voice Questionnaires (SVQ) are issued to allow the student to comment in detail on all aspects of the course as well as the general environment and support services and facilities. In addition to this, feedback is also provided by External Examiners, industry liaison groups and professional bodies. Responses to, and actions resulting from, these consultations are addressed fully in the Annual Course Appraisal. In addition, formal mechanisms are now in place to ensure that a response to student feedback is provided to the whole cohort via the Course Leader.
University Student Feedback Mechanisms	The University and RGU:Union work in partnership to create an environment which stimulates: • the participation of students, by empowering them to proactively provide views and opinions; • a supportive learning community where students and staff engage in meaningful dialogue; and • the engagement of students in the design of solutions and enhancements. This approach is underpinned by the <i>Student Partnership Agreement</i> which promotes the ethos of partnership at all levels of the University. Further information can be found at the Student Representation and Partnership Moodle Area: Student Representation & Partnership RGU . There are a variety of opportunities for students to provide feedback to the University, and to become actively involved in shaping their learning experience. These opportunities are integral to the University's approach to the quality assurance and enhancement of teaching and learning, and the holistic student experience. Mechanisms through which students are engaged and supported include: • participation in student evaluation questionnaires and where relevant the <i>National Student Survey (NSS)</i> ; • staff/student liaison arrangements at course/programme level; • support for Student Representatives;

	• student representation on Institution-Led Subject Review Panels and Validations; • student representation on key University committees.
Course-Specific Student Feedback Mechanisms	The University uses a variety of mechanisms to obtain feedback from students, and to involve them in their learning experience. This is integral to the University's approach to the quality assurance and enhancement of teaching and learning, and the holistic student experience. Mechanisms include: • Student Voice Questionnaires. • Staff/student liaison arrangements at course/programme level. • Support for Student Representatives. • Student representation on Institution-Led Subject Review Panels. • Student representation on most of the University's key committees. • Annual meetings of the Principal and Deans with Student Representatives. In addition, there is regular collaboration and engagement with officers of the Student Association. More detailed information on student engagement may be found at the <i>Student Involvement</i> website at: www.rgu.ac.uk/studentinvolve.

Awards

Stage 1

<i>Permissible Awards</i>	<i>Title</i>	<i>Location</i>	<i>Target Award</i>	<i>PSRB</i>	<i>Award Credits</i>
Postgraduate Certificate - PgCert	Business Analytics for Healthcare Management	Aberdeen, United Kingdom	Exit Award		60
Postgraduate Diploma - PgDip	Business Analytics for Healthcare Management	Aberdeen, United Kingdom	Exit Award		120
Master of Science - MSc	Business Analytics for Healthcare Management	Aberdeen, United Kingdom	Target Award		180

Level Learning Outcomes

On successful completion of this Course the learner will be able to :

#	Description	SCQF Characteristic	SCQF Level
LLO1	An advanced understanding of how data can be analysed to discover insights into business problems to support decision-making and optimising organisational processes.	SC1	SCQF 11
LLO2	A detailed knowledge of all stages of the Data Mining Lifecycle and their application in a healthcare context.	SC1	SCQF 11
LLO3	A critical understanding of the key features, functions and limitations of different data management, analysis and visualisation technologies and their application within an organisational context.	SC1	SCQF 11
LLO4	An extensive understanding of different data types and structures.	SC1	SCQF 11
LLO5	A critical understanding of the legal, ethical, social and policy considerations in data management and analysis.	SC1	SCQF 11
LLO6	A critical understanding of underlying communications, information management and public health, principles and concepts.	SC1	SCQF 11
LLO7	A critical understanding of the broader healthcare environment and the underpinning principles and concepts of public health in different settings.	SC1	SCQF 11
LLO8	Design and manage databases using appropriate technologies.	SC2	SCQF 11
LLO9	Understand and write code in programming languages appropriate for business analytics.	SC2	SCQF 11
LLO10	Use software and technologies for business analytics and visualisation.	SC2	SCQF 11
LLO11	Design and manage business analysis solutions in response to client needs.	SC2	SCQF 11
LLO12	Implement a range of research methods and associated software in both an academic and professional context.	SC2	SCQF 11
LLO13	Understand a wide range of healthcare contexts and scenarios where data is employed to support decision making and organisational process.	SC2	SCQF 11
LLO14	Work autonomously and effectively in order to meet project targets and deadlines.	SC3	SCQF 11
LLO15	Develop project-management skills and methodologies to work effectively, both as an individual and as a team member.	SC3	SCQF 11
LLO16	Develop appropriate responses to client needs and data gathering.	SC3	SCQF 11
LLO17	Implement methods for evaluation in order to review and improve practice.	SC3	SCQF 11
LLO18	Self-reflect and identify training and development needs in both themselves and others.	SC3	SCQF 11
LLO19	Develop strategies and methods for communicating effectively between project stakeholders and different audiences in a business or organisational context.	SC4	SCQF 11
LLO20	Communicate logically and persuasively.	SC4	SCQF 11
LLO21	Produce professional proposals and reports detailing the scope and outcomes of a project.	SC4	SCQF 11
LLO22	Analyse different types of data.	SC4	SCQF 11
LLO23	Demonstrate advanced analytic skills using industry standard software and technologies.	SC4	SCQF 11
LLO24	Present complex data in a meaningful graphical format.	SC4	SCQF 11
LLO25	Analyse and evaluate a healthcare management problem identifying key requirements and possible solutions.	SC5	SCQF 11
LLO26	Gather, analyse and synthesise data from a range of sources to inform and develop business / organisational decisions and practice.	SC5	SCQF 11
LLO27	Manage complex projects, data and teams.	SC5	SCQF 11

LLO28	Make decisions based on complex and perhaps incomplete information.	SC5	SCQF 11
LLO29	Manage time and resources effectively.	SC5	SCQF 11
LLO30	Work autonomously in solving problems and offering solutions.	SC5	SCQF 11
LLO31	Demonstrate an ethical approach to data management and business analytics.	SC5	SCQF 11

Programme Outcome Types Reference		
#	SCQF Characteristic	SCQF Level
SC1	Knowledge and understanding	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC2	Practice: Applied knowledge, skills and understanding	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC3	Generic cognitive skills	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC4	Communication, numeracy and IT skills	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
SC5	Autonomy, accountability and working with others	SCQF 7 - SCQF 7 SCQF 8 - SCQF 8 SCQF 9 - SCQF 9 SCQF 10 - SCQF 10 SCQF 11 - SCQF 11 SCQF 12 - SCQF 12
